

INDIAN SCHOOL SOHAR  
PERIODIC TEST III  
MATHEMATICS

Set 1

STD: IX  
09-01-18

Marks: 20  
Time : 40 minutes

**General Instructions:**

- (i) All questions are compulsory
- (ii) The question paper consists of 9 questions divided into four sections A, B, C and D.
- (iii) Section A contains 3 questions of 1 mark each. Section B contains 2 questions of 2 marks each. Section C contains 3 questions of 3 marks each. Section D contains 1 question of 4 marks.
- (iv) There is no overall choice. However, an internal choice has been provided in four questions. You have to attempt only one of the alternatives in all such questions.
- (v) Use of calculators is not permitted

Section A

Question numbers 1 to 3 carry 1 mark each.

1. Evaluate  $\sqrt{(3^{-2})}$
2. If  $x+2$  is a factor of  $2x^3 - k$ , find value of  $k$
3. In the figure, AOB is a straight line. Find the measure of  $\angle COD$

Section B

Question numbers 4 and 5 carry 2 marks each.

4. Prove that equal chords of a circle subtend equal angles at the centre.

OR

In the figure, O is the centre of the circle. Arc BCD subtends an angle of  $140^\circ$  at the centre. BC is produced to P and CD is joined. Find measure of  $\angle DCP$ .

5. Show that if the diagonals of a quadrilateral bisect each other at right angles, then it is a rhombus.

**Section C**

***Question numbers 6 to 8 carry 3 marks each.***

6. Give the equations of two lines passing through  $(-3, 4)$ . How many more such lines are possible ?

7. In the given figure, if two isosceles triangles have a common base, prove that line segment joining their vertices bisects the common base at right angles.

***OR***

In Fig. given below, AD is the median of  $\triangle ABC$ .  $BE \perp AD$ ,  $CF \perp AD$ . Prove that  $BE = CF$

8. Parallelograms on the same base and between same parallels are equal in area. Prove this.

***OR***

Diagonals AC and BD of quadrilateral ABCD intersect each other at O in such a way that  $\text{ar}(\triangle AOD) = \text{ar}(\triangle BOC)$ . Prove that ABCD is a trapezium.

**Section D**

***Question number 9 carries 4 marks***

9. Construct a right triangle whose perimeter is 10 cm and one acute angle is  $60^\circ$

***OR***

Construct a  $\triangle PQR$  in which  $QR = 7$  cm,  $\angle Q = 45^\circ$  and  $PQ - PR = 3$  cm.

\*\*\*\*\*THE END\*\*\*\*\*
