|  | CASE BASED QUESTION |  |
| 14 | A doctor is to visit a patient. From the past experience it is known that the probabilities he will come by rain, bus, scooter or by other means of transport are respectively $\frac{3}{10}, \frac{1}{5}, \frac{1}{10}$, and $\frac{2}{5}$. The probabilities he will be late are $\frac{1}{4}, \frac{1}{3}$ and $\frac{1}{12}$, if he comes by train, bus and scooter respectively, but if he comes by other means of transport, then he will not be late. When he arrives, he is late . <br> Based on the above situation answer the following |  |
|  | What is the probability he comes by train | 2 |
|  | What is the probability he comes by scooter | 2 |
